

ABSTRACT OF THE DISCLOSURE

Embodiments of the invention relate to a medical device with a visual indicator that changes color when exposed to a particular environment and/or chemical. The visual indicator may be printed or otherwise affixed on a portion of a medical device, for example the handle, and initially have the same color as that portion. When exposed to a particular environment and/or chemical, the visual indicator changes color so that it has a different color than that portion of the medical device.
